Art Unit: 1724

1. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1 "flocculate" appears to be erroneous and should be changed to - flocculant -.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 5, and 8-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Lewellyn 5,516,435. It is submitted that Lewellyn disclose (see col. 3 lines 25-67 and col. 10 lines 15-45) a method and agent for treating Bayer process liquor as recited in the instant claims.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4, 6, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lewellyn. The claims differ from Lewellyn as applied above by reciting the use of a

specific amount of the combination, and the addition of the flocculant and starch together as a solution separate from the dextran, and together upstream of the dextran addition. It is well known in the art of liquid purification to regulate the amount of flocculant used and the sequence of addition, based on the solids content and the electrical charge of the solids being treated, respectively. It would have been obvious to one skilled in the art of liquid purification to modify the method of Lewellyn by adding the recited amount and by utilizing the separate and sequential addition, depending on the specific process liquor treated and results desired, absent a sufficient showing of unexpected results.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter A. Hruskoci whose telephone number is (703) 308-3839. The examiner can normally be reached on Monday through Friday from 6:30 AM to 4:00 PM.
